

School Health MOU Template:

Public School System will:

- Store adequate KI for students, faculty and other school staff onsite at each school within the 10-mile EPZ.
- Assure appropriate storage conditions and security for KI
- Maintain inventory record and expiration date of supply.
- Notify Public Health Department of inadequate supplies due to changes in student body size of individual schools or expired stocks.
- Develop School KI procedures for each 10-mile EPZ School.
- Orient annually school faculty, nurses, and other school staff in procedures for distribution and administration of KI in a nuclear power plant emergency.
- Provide KI information to parents/guardians of all students and track permission status from parents/guardians for KI administration to their children.
- Distribute/Administer KI to students, faculty and other school staff in a nuclear power plant emergency following authorization from appropriate state or local officials.
- Report back to Local Health Director (or designee) information on distribution/administration of KI following a NPP event, including number of doses distributed/administered, location (at school or evacuation site), and the number and nature of any observed or reported adverse effects.

Public Health Department will:

- Provide 10-mile EPZ schools with adequate KI for students, faculty, and other school staff (at least one KI tablet for each individual).
- Provide background information and materials on KI for distribution to school administrators, faculty, other school staff and to parents/guardians of all students.
- Provide education and training to faculty, school nurses, and other school staff on KI administration procedures.
- Provide consultation to school administration regarding development of KI distribution and administration procedures.
